### Innovative Materials

Innovative Materials is an interactive, digital journal about new and/or innovatively applied materials in the civil engineering sector, construction, industry, architecture and design.

Innovative Materials provides information on material innovations, or innovative use of materials. The idea is that the ever increasing demands lead to a constant search for better and safer products as well as material and energy savings. Enabling these innovations is crucial, not only to be competitive but also to meet the challenges of enhancing and protecting the environment, like durability, C2C and carbon footprint.

By opting for smart, sustainable and innovative materials constructors, engineers and designers obtain more opportunities to distinguish themselves.

As a platform Innovative Materials wants to help to achieve this by connecting supply and demand.

### Digital

Innovative Materials is a digital journal, which logically provides the opportunity to add more information than is customary in a conventional paper journal. Often the articles are linked to a relevant website, underlying information, reports, video material and / or previously published articles.

### Distribution and range

Innovative Materials is distributed among its own subscribers/network, but also through the networks of the partners. In 2019 this includes organisations like M2i, MaterialDesign, 4TU (a cooperation between the four Technical Universities in the Netherlands), the Bond voor Materialenkennis (material sciences), SIM Flanders, FLAM3D, Materials (trade fair) and Material District. Every year the number of partners is growing, partly due to the English edition.

**The idea of distribution is as follows: Innovative Materials offers a platform to its partners. Those partners will distribute the magazine digitally via their own networks.**
